📄 Summary

Senior Software Developer with 12+ years building Adobe Commerce (Magento 2) platforms for international retailers across the UAE, Kuwait, Lebanon, Australia, Russia, and the USA — from pricing and loyalty systems to inventory and logistics integrations. I thrive on ambiguity, turning loosely defined requirements into working systems. Adobe Certified Expert and Adobe Certified Professional (Adobe Commerce Developer), and increasingly the person clients and teams turn to for mentorship and technical direction. Brings rare cross-platform migration expertise — from custom PHP to Magento 1 to Magento 2, and from Magento 1 to Adobe Commerce On-Premise — along with hands-on experience leading small development teams through task assignment and code review.

📁 Experience

Senior Software Developer, *Krish TechnoLabs*

Sep 2021 – Present
Remote

- Develop and maintain Adobe Commerce (Magento 2) stores, including custom themes, extensions, and Magento ERP/data migration.
- Integrated Adobe Commerce with third-party payment gateways, shipping providers, and marketing/reward platforms across multiple client projects.
- Optimized site performance and scalability via caching and database tuning, using New Relic, Google PageSpeed Insights, and GTmetrix to identify bottlenecks and validate improvements in page and GraphQL API response times, while maintaining PCI compliance.
- Conducted code reviews, debugging, unit/integration testing, and UAT to ensure system stability and release quality.
- Collaborated directly with clients, designers, and project managers across multiple international markets, translating technical constraints into business-ready solutions.
- Enforced Adobe Commerce coding standards (PSR) and security best practices across the development lifecycle.

Senior Software Developer, *Sunarc Technologies*

Mar 2014 – Sep 2021
Bikaner

- Designed and implemented RESTful APIs for third-party service integration, supporting secure, high-volume data flow.
- Identified and resolved architectural and performance bottlenecks, improving Magento 2 scalability for high-traffic, high-volume stores.
- Mentored junior developers through daily stand-ups, code reviews, and Git-based version control.
- Developed reusable, testable PHP modules for Magento 2 extensions, reducing rework across client projects.
- Communicated directly with clients to gather requirements and deliver solutions aligned to business goals.

🎓 Education

Master of Computer Applications, *Jaipur National University*

Jul 2013 – Jul 2014
Jaipur

Master of Science (M.Sc) in Information Technology, *Maharaja Ganga Singh University*

Jul 2011 – Jul 2013
Bikaner

Technical Skills

- Adobe Commerce (Magento 2) — Cloud, On-Premise & Open Source
- API Development (REST, GraphQL, SOAP)
- JavaScript, JQuery, CSS, HTML
- ERP & Data Migration
- React.js
- Security Hardening (PCI Compliance)
- Unit & Integration Testing
- Marketing Automation
- Search Engine Integration (Klevu, Algolia)
- Technical Leadership
- Git
- PHP
- MySQL
- Payment Gateways
- Performance Optimization
- Code Review
- Shipping Providers
- PSR Standards
- Message Queues
- Client Communication
- Requirement Analysis
- Developer Mentoring

Certification

- Adobe Certified Expert - Adobe Commerce Developer [🔗](#)
- Adobe Certified Professional - Adobe Commerce Developer [🔗](#)

Projects

Grandiose Supermarket, Dubai, United Arab Emirates (Magento Open Source)

- Built a receipt-upload rewards feature validating customer receipts in real time against third-party platforms (Zinrelo, Talon.One [🔗](#)), auto-crediting points on approval with a cron-based ERP fallback for pending or unmatched receipts.
- Developed a high-volume ERP product import/update pipeline processing 10,000–20,000 SKUs per batch, distinguishing new vs. updated items for efficient bulk processing.
- Diagnosed and resolved a special-price/attribute CSV export that was timing out or taking over a minute; rewrote the underlying query and CSV-write logic to export 50,000 products in 3–5 seconds.
- Architected a bulk price and inventory sync pipeline from third-party sources into Magento, coordinating real-time updates across cache, indexer, and Klevu search.
- Extended Magento's native special-price feature to support time-based pricing across admin, storefront, and GraphQL, with time-based product availability enforced consistently across cart, checkout, website, mobile, and search.
- Built a Customer Segment Module enabling rule-based automatic segment assignment with segment-specific cart rules, plus a Refer-a-Friend rewards program with coupon-based tracking.
- Designed a zone-based inventory and geofencing system: admin-configurable delivery polygons in Google Maps assigned to specific inventory sources, with real-time stock/availability checks based on customer location.
- Architected a message-queue-driven order workflow integrating Grubtech (kitchen operations via API and webhooks) and FarEye (last-mile logistics), fanning out post-order-creation events to SMS notifications and internal picker/tracking dashboards.
- Integrated Adjust for mobile app install attribution, in-app event tracking, and campaign performance measurement; integrated MoEngage to track user behavior across app and website and to power push notifications and engagement campaigns.
- Implemented Age-Restricted Product controls enforced consistently across app, website, and third-party search/wishlist; delivered a SAP integration alongside the existing ERP.

Antoine Online, Beirut, Lebanon (Adobe Commerce Cloud)

- Designed and built Product Add/Update/Delete APIs, streamlining data processing and improving import/export efficiency.

- Implemented ERP integration enabling seamless offline order processing between Magento and the client's ERP system.
- Diagnosed a recurring back-order/out-of-stock issue in the product import flow and built a custom CSV import patch to resolve it at the root cause.
- Developed custom modules and extensions to enhance overall store functionality, including improved product management workflows.

Fantasy World Toys, Kuwait City, Kuwait (Adobe Commerce On-Premise)

- Served as dedicated client-side developer, handling day-to-day backend operations and prioritization.
- Led a team of 2–3 developers on task assignment and code review, sharing delivery accountability with the project manager for on-time, quality releases.
- Implemented multiple delivery fulfillment options — Express Delivery, Click & Collect, and Curbside Pickup (in-store parking-based delivery) — to support flexible customer delivery preferences.
- Optimized REST and GraphQL APIs to reduce response times; integrated Algolia for product search and the Tabby payment method to streamline checkout.

ToolMart, Perth, Australia (Adobe Commerce On-Premise)

- Designed and led the migration architecture from Magento 1 to Adobe Commerce On-Premise, including full data migration to move the store onto a supported, scalable platform.
- Rebuilt custom themes and redeveloped extensions on the new architecture, preserving existing business logic while modernizing the codebase.
- Managed Git workflow, code reviews, and deployments throughout the migration and post-launch stabilization.
- Enhanced functionality through custom extensions and optimized website performance post-migration.

Aquanexus, USA (Magento Open Source)

- Built a multi-vendor e-commerce setup running multiple independent vendor websites from a single Magento Open Source instance, using domain mapping so each vendor operates on its own domain.
- Designed a Payment Reminder Module with automated COD/bank-transfer email reminders to reduce missed payments.
- Customized Webkul modules for vendor registration, purchase orders, and split orders, enabling a self-service multi-vendor workflow.
- Implemented and managed ongoing integration of vendor-facing functionality, ensuring seamless operation and a consistent experience across all vendor storefronts.

Sterling Machinery, USA (Magento Open Source)

- Analyzed client requirements to design the system architecture for machinery product management — including the master/child machine data model and admin workflow — before implementation began.
- Migrated the platform from custom PHP to Magento 1, then to Magento 2 Open Source, rebuilding product display, listing, and admin functionality on the new architecture.
- Customized product listing and detail-page design, specifications, options, and category-based sorting for machinery products.
- Developed admin modules for machinery products, brand pages, and user role-specific tabs.
- Implemented Ajax-driven product specification and equipment-loading logic, added master/child machine features, and integrated child product quantities into the admin product grid.
- Enhanced the Cart2Quote module for quote assignment and email design, improving workflow and user experience.

Kalombo, Moscow, Russia (Magento Open Source)

- Designed the platform architecture with performance as the primary constraint, shaping module selection, theme structure, and JS/CSS optimization decisions around load-speed goals from the outset.
- Built the platform natively on Magento Open Source, including theme customization and Auto Address API integration for localized address entry.
- Set up Russia-specific payment methods to support local market requirements.
- Managed product/attribute import via CSV and optimized performance by removing unused modules and streamlining theme JS/CSS.

- Conducted code reviews and deployments for third-party modules and themes; planned the project roadmap, including Git setup, ETA, and production timelines.

Awards

Mountain Movers, *Krish Technolabs*

Delivering outstanding projects and setting benchmarks by earning recognition, awards, and pride for Krish.

Best Team Player, *Sunarc Technologies*

Recognized for exceptional teamwork and collaboration. Consistently deliver outstanding projects, earning awards and accolades.

Currently Learning

Exploring Python and MongoDB, and deepening React.js full-stack skills — expanding toward modern backend and full-stack development alongside core PHP/Magento expertise. Also exploring how AI capabilities (personalized recommendations, AI-driven search, chatbots, and automated content generation) can be integrated into Adobe Commerce/Magento stores to give store owners a competitive edge.
